

MKY FORWARDING

The Booking Assistant

How it works, step by step

A walk through the client's experience and your team's, so we can check it against the way MKY works and decide what to change.

Telegram and website · Arabic and English · Prepared 16 September 2026

A booking desk that is open all day, in the client's own chat

The assistant takes a booking request, collects the papers, tracks the shipment, and hands anything else to a person. Every decision that matters comes from MKY's own records, not from guesswork.

Where

Telegram, and the chat window on the website. The same conversation, the same rules, on both.

Language

Every message is in Egyptian Arabic and English at once, so a card can be forwarded to a driver, a broker or a customs agent.

When

Bookings and tracking, any hour. A person from 9 AM to 7 PM Cairo time — and a direct number for anything that cannot wait.

Three things a client can do

Book my shipment

Three steps: who is booking, the vehicle and its papers, the booking itself. A reference and a PDF at the end.

Track my shipment

By chassis number or booking reference. Status, vessel, location and arrival date, read live from MKY's records.

Talk to an agent

Straight to a person, no menu in between. After hours: when the desk is back, and a direct number if it is urgent.

A client can tap the buttons or simply type: "I want to book", "where is my truck", "عايز أكلم موظف".

Booking in three steps

1 Your details

The client's name and a mobile number. On Telegram, one tap shares a verified number.

2 The vehicle and its papers

Chassis check, make, route, MRN, and the documents — one at a time, or all in one message with the files attached.

3 Your booking

A summary card to confirm. Then the booking reference and a PDF copy, straight away.

The client is told which step they are on at every stage: "Step 1 of 3 — your details", "Step 2 of 3 — the vehicle and its papers", "Step 3 of 3 — your booking".

Your details

- **Name** — the client name the booking is registered under.
- **Mobile number** — shared with Telegram's "Share my number" button (verified), typed in any digit system, or offered back from the last booking: "Is +20... still your number? Reply yes."
- Both can come in **one message**: "Ariful and my number is +49 176 ..." is read as a name and a number.
- The number is kept on the client's record. When they later ask for an agent, they are not asked for it again.

 Let us start your booking.

Step 1 of 3 — your details.

 What client name should we use for this booking?

Giza Freight Lines and my number is +20 111 222 3344

 Thank you, Giza Freight Lines — I have +201112223344 as your number.

Step 2 of 3 — the vehicle and its papers. ...

The vehicle

The chassis number is checked first

New nothing on file — continue.

Known, not booked we hold the unit — the make is filled in from our records.

Already booked a live booking exists — the client is given its reference and route, and **no second request is created**. This check runs wherever the chassis appears, even inside a pasted block.

Then the rest

- **Make** (and model) — "مرسيدس أكتروس" becomes Mercedes-Benz Actros on the paperwork.
- **Port of loading** — any city or port in Europe.
- **Egyptian destination** — one of the five we serve: Alexandria (incl. El Dekheila), Port Said, Damietta, Ain Sokhna, Suez. Anything else is refused with the list.
- **MRN** — "I already have one" or "I need MKY to issue it", which opens a request for the customs desk.

The papers

What is asked for

- Commercial invoice
- Transport document (CMR / brief)
- MRN export declaration — unless MKY is obtaining the MRN

What happens to each file

- It is read automatically and its type recognised — a scan or a phone photo works too.
- The chassis on the paper is checked against the booking. A paper for another vehicle is flagged, not counted.
- A file the assistant cannot make out is asked about by name: "I have scan-1.pdf, but I am not sure what it is."
- The assistant says *received*. Only your team says *verified*.

Everything at once

The client can attach the three files to one message and write the details on it. Several files sent together get **one** answer, after all of them are read.

[3 files]

Rotterdam to Damietta. DAF XF 480 FT, client Giza Freight Lines, chassis XLRTEH4350G741552

Received: Brief, Invoice, MRN.

Noted from your message: client Giza Freight Lines · chassis XLRTEH4350G741552 · make DAF XF 480 FT · route Rotterdam → Damietta Port.

Perfect! We have everything we need.

Step 3 of 3 — your booking.

Your booking

- A **summary card** built from exactly what the client gave: client, phone, chassis, make, route, and each document with a tick.
- **Edit** any line — a changed chassis is checked again, a changed route re-asks both ports.
- **Confirm** — the request is sent to Operations in one step that cannot be done twice, however many times the button is pressed.
- The client immediately gets the **booking reference** in the reply and a **PDF copy** of the request, headed "Awaiting confirmation".
- A **status card** is pinned to the top of the chat and follows the vehicle until delivery.

 Please confirm your booking details
 Client: Giza Freight Lines
 Phone: +201112223344
 Chassis · VIN: XLRTEH4350G741552
 Make: DAF XF 480 FT
 Route: Rotterdam → Damietta Port
 Documents: ☒ Invoice ☒ Brief ☒ MRN
[☒ Confirm] [ Edit] [ Cancel]

 Booking request confirmed!
 Your booking reference: MKY-BKG-260916-0AFH
Keep it — it is how you track the shipment.
I am sending your request to our Operations Team now, and your PDF copy follows.

What happens at the desk after Confirm

Review

The request appears in the Booking Queue with its documents. Each paper can be verified, or rejected with a reason — the client is told and sends a replacement in the same chat.

Ask the client

"Request info" parks the request as *waiting for client* and messages them. Their reply — text or a file — brings it back to the queue with a "client responded" badge.

Confirm or reject

Confirm opens the shipment and sends the client a confirmation and a second PDF, headed "Confirmed". Reject sends the reason and a way to reach the team.

Every message to the client is queued and retried until it is delivered, and never sent twice. A booking is never lost because an email or a Telegram call failed.

Track my shipment

- The client sends a chassis number or a booking reference — in a sentence, with a label, in Arabic, in any spacing.
- The card shows status, vessel, current location, route, expected arrival and the last update — every value from MKY's records, or "Not available yet". Nothing is guessed.
- **Refresh** re-reads the records rather than repeating the last answer.
- A booking that has been confirmed but not yet shipped says so, instead of showing empty fields.
- A client sees **only their own** shipments. A reference that belongs to somebody else gets the same "not found" as a wrong one.

Chassis: WDB96340310777421

 Found it!
 MKY-26025 — Mercedes-Benz Actros 1845
Status: In transit
Vessel: MSC Aurora
Location: Mediterranean
Route: Vilnius → Alexandria Port
ETA: 2026-09-19
[ Refresh status] [ Talk to an agent]

Talk to an agent

In hours — 9 AM to 7 PM Cairo time

Connected right away. The desk's number is shown, the request is logged for the team before the client has typed a word, and the assistant asks what they need. A number already on file is not asked for again.

After hours

The assistant says when agents are back and asks whether it is urgent.

Urgent the responsible person's direct number, and the ticket is opened marked URGENT at the top of the desk's list.

It can wait the question is taken and the ticket waits for the morning.

🌙 Our agents are available from 9 AM to 7 PM Cairo time, and it is outside those hours now. I have logged your request — an agent will get back to you tomorrow from 9 AM.

🔔 Is it urgent?

[🔔 Yes, it is urgent] [⌚ No, it can wait]

☎ If it cannot wait, you can reach our responsible person directly on +48 512 345 678, any time.
And tell me what the emergency is about, so the team has it in front of them first thing.

The number shown is a placeholder until MKY provides the real one.

Rules the assistant never breaks

- 1 It never invents.** No phone number, price, date or customs requirement is made up. If something is not configured, it says so.
- 2 One chassis, one booking.** A unit with a live booking cannot be booked again — the rule is enforced three times over, down to the database itself.
- 3 Received is not verified.** The assistant confirms a file arrived. Only your team declares it correct.
- 4 Your own shipments only.** A forwarded reference cannot be used to read another company's route or schedule.
- 5 Decisions come from records.** The AI reads a chassis out of a sentence and answers questions. Whether a booking may be made, what is missing, and what goes to Operations is decided from MKY's data — and tested, 237 times, without any AI in the loop.
- 6 Every action is logged.** Who did what, when — without document contents or secrets.

The Operations console

SCREEN	WHAT IT IS FOR
Dashboard	Counts you can click: new, under review, waiting for client, overdue. The desk is never marked late for something the client owes.
Booking Queue	Every request with whose turn it is (us / client) and the next action. Open one: readiness ticklist, documents to verify or reject, messages to the client, internal notes, Confirm.
Document Review	Everything waiting to be checked, across all bookings.
MRN Requests	Applications MKY is making on a client's behalf. Record the MRN and the client is told.
Client Requests	Tickets from "Talk to an agent", with the number and what they said; urgent ones marked. Reply, or send and wait.
Confirmed Bookings · Shipments	What was confirmed and by whom; set vessel and ETA on a shipment and tick "tell the client".
My Tasks	Only what is assigned to you.

Does this match how MKY works?

- 1.** Are the three steps in the right order — the person first, then the vehicle, then the booking?
- 2.** Documents: invoice, transport document and MRN. Should ACID or EUR.1 be required at booking time?
- 3.** When MKY obtains the MRN, what exactly is needed from the client? The assistant currently asks for a free description and raises a task.
- 4.** Desk hours: 9 AM to 7 PM, every day? Which days off? Whose direct number goes to urgent after-hours clients?
- 5.** General questions ("how long to Alexandria?") are answered by the AI from MKY's documents. Should they go to an agent instead?
- 6.** The five Egyptian ports — complete? Any European loading points to refuse?
- 7.** How long may a new request wait before it counts as overdue on the dashboard?
- 8.** Who is told about a new booking: which email inbox, which staff Telegram group?

NEXT

Next steps

Decisions from MKY

The eight questions on the previous page. Most are settings the desk can change without a new release.

Real data and numbers

Replace the placeholder direct number, load real shipment data, connect the team's email and Telegram group.

Hand-over

A short session with the desk on the console, a run-through of the demo kit, and the go-live checklist.

Everything shown here is running today and can be tried on the Telegram bot with the demo kits.
